Review: Top-Down Parsing - LL(1)

Assignment Project Exam Help

Basic Idea:

<https://powcoder.com>

- The parse tree is constructed from the root, expanding non-terminal nodes on the tree's frontier following a **leftmost** derivation.
- The input program is read from **left** to right, and input tokens are read (consumed) as the program is parsed.
- The next non-terminal symbol is replaced using one of its rules. The particular choice has to be unique and uses parts of the input (partially parsed program), for instance the first token of the remaining input.

Review: Predictive Parsing

Basic idea:

For any two productions $A ::= \alpha$ and $A ::= \beta$, we would like
a distinct way of choosing the correct production to expand.

Assignment Project Exam Help

Add WeChat powcoder

Revisiting the id_list Example

```
id_list ::= id id_list_tail  
id_list_tail ::= , id id_list_tail  
id_list_tail ::= ;
```

Remaining Input:
 , B , C ;

<https://powcoder.com>

Add WeChat powcoder

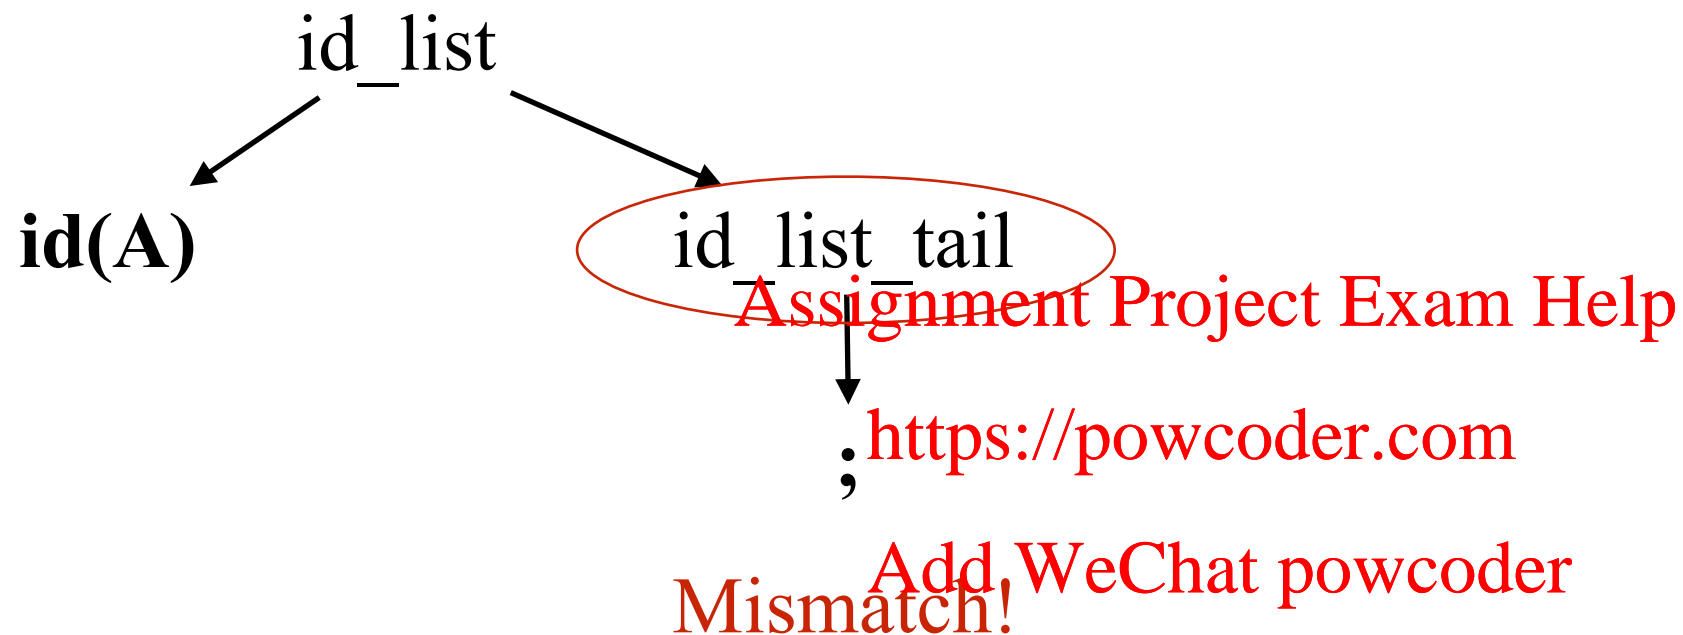

Applied Production:

Revisiting the id_list Example

```
id_list ::= id id_list_tail
id_list_tail ::= , id id_list_tail
id_list_tail ::= ;
```

Remaining Input:

,B , C ;

Applied Production:

~~id_list_tail ::= ;~~

Revisiting the id_list Example

```
id_list ::= id id_list_tail  
id_list_tail ::= , id id_list_tail  
id_list_tail ::= ;
```

Remaining Input:
 , B , C ;

<https://powcoder.com>

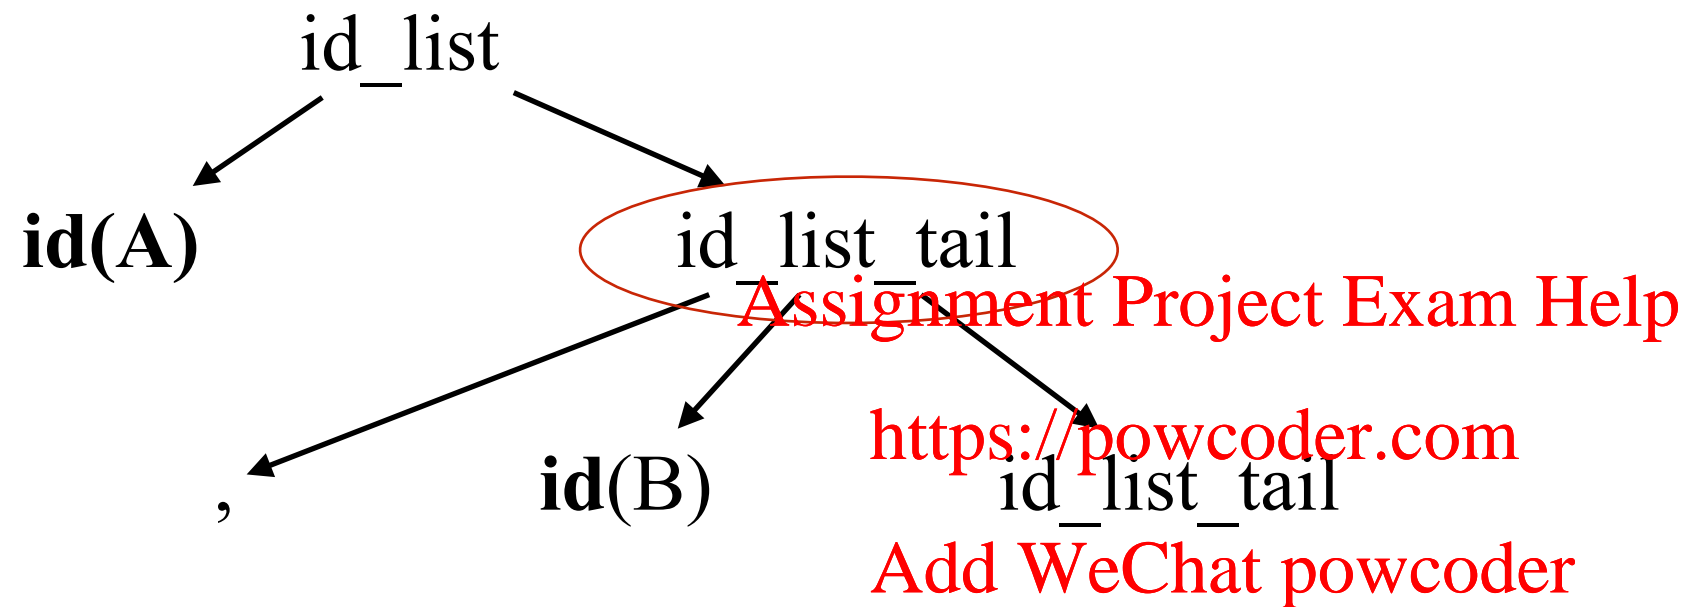

Add WeChat powcoder

Applied Production:

Revisiting the id_list Example

```
id_list ::= id id_list_tail  
id_list_tail ::= , id id_list_tail  
id_list_tail ::= ;
```

Remaining Input:
 , **B** **,** **C** **;**

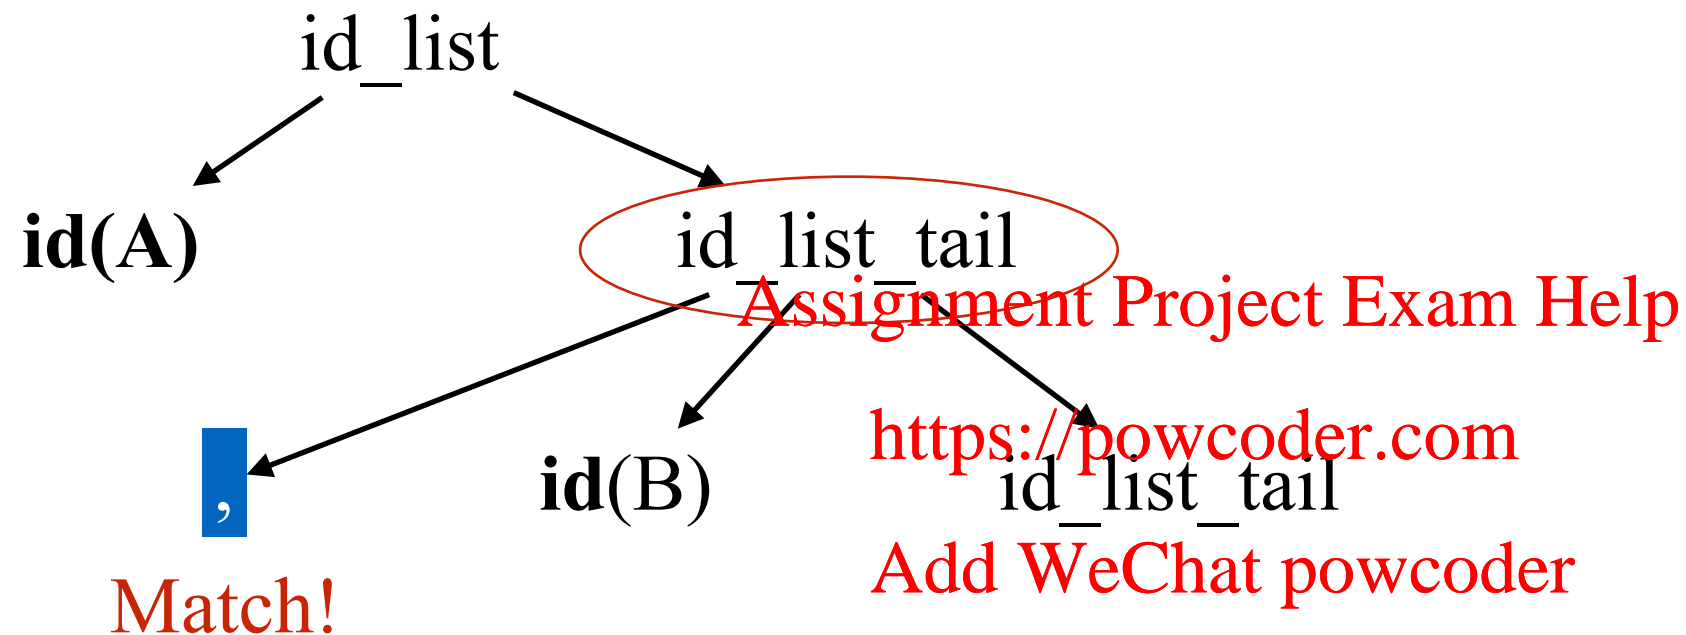

Applied Production:
 $\text{id_list_tail} ::= \text{, id id_list_tail}$

Revisiting the id_list Example

```
id_list ::= id id_list_tail
id_list_tail ::= , id id_list_tail
id_list_tail ::= ;
```

Remaining Input:

,B , C ;

Applied Production:
`id_list_tail ::= , id id_list_tail`

Review: First Set

For some string α , define **FIRST**(α) as the set of tokens that appear as the first symbol in some string derived from α .

That is

$x \in \text{FIRST}(\alpha)$ iff $\alpha \Rightarrow^* \mathbf{x}\gamma$ for some string γ
Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Review: Predictive Parsing

Key Property:

Whenever two productions $A ::= \alpha$ and $A ::= \beta$ both appear in the grammar, we would like

- $FIRST(\alpha) \cap FIRST(\beta) = \emptyset$

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Revisiting the id_list Example

$$\begin{aligned}\text{id_list} &::= \mathbf{id} \text{id_list_tail} \\ \text{id_list_tail} &::= , \mathbf{id} \text{id_list_tail} \\ \text{id_list_tail} &::= ;\end{aligned}$$

Remaining Input:
 , B , C ;

Assignment Project Exam Help

$FIRST(, \mathbf{id} \text{id_list_tail}) = \{ , \}$

$FIRST(;) = \{ ; \}$

<https://powcoder.com>

$FIRST(, \mathbf{id} \text{id_list_tail}) \cap FIRST(;) = \emptyset$

Add WeChat-powcoder

Given `id_list_tail` as the first **non-terminal** to expand in the tree:

If the first token of remaining input is `,` we choose the rule

$$\text{id_list_tail} ::= , \mathbf{id} \text{id_list_tail}$$

If the first token of remaining input is `;` we choose the rule

$$\text{id_list_tail} ::= ;$$

Revisiting the LL(1) Parsing Example

$S ::= a S b \mid \epsilon$

Remaining Input:

b b b

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Applied Production:

Revisiting the LL(1) Parsing Example

$S ::= a S b \mid \epsilon$

Remaining Input:

b b b

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Applied Production:

~~$S ::= a S b$~~

Mismatch!

It only means $S ::= a S b$ is not the right production rule to use!

Revisiting the LL(1) Parsing Example

$S ::= a S b \mid \epsilon$

Revisiting the LL(1) Parsing Example

$S ::= a S b \mid \varepsilon$

$S ::= \varepsilon$ turns out to be the right rule later.

However, at this point, ε does not match “b” either !

Review: Follow Set

For a non-terminal A , define **FOLLOW**(A) as the set of terminals that can appear immediately to the right of A in some sentential form.

Thus, a non-terminal's **FOLLOW** set specifies the tokens that can legally appear after it. A terminal symbol has no **FOLLOW** set.

Assignment Project Exam Help

<https://powcoder.com>

FIRST and FOLLOW sets can be constructed automatically

Review: Predictive Parsing

Key Property:

Whenever two productions $A ::= \alpha$ and $A ::= \beta$ both appear in the grammar, we would like

- $FIRST(\alpha) \cap FIRST(\beta) = \emptyset$, and
- if $\alpha \Rightarrow^* \epsilon$, then $FIRST(\beta) \cap FOLLOW(A) = \emptyset$

Analogue case for $\beta \Rightarrow^* \epsilon$.

Note: due to first condition, at most one of α and β can derive ϵ .

This would allow the parser to make a correct choice with a lookahead of only one symbol!

Review: LL(1) Grammar

Define $PREDICT(A ::= \delta)$ for rule $A ::= \delta$

- $FIRST(\delta) - \{ \epsilon \} \cup Follow(A)$, if $\epsilon \in FIRST(\delta)$
- $FIRST(\delta)$ otherwise

Assignment Project Exam Help

A Grammar is LL(1) iff <https://powcoder.com>

$(A ::= \alpha \text{ and } A ::= \beta)$ implies

Add WeChat powcoder

$$PREDICT(A ::= \alpha) \cap PREDICT(A ::= \beta) = \emptyset$$

Table Driven LL(1) Parsing

Example:

Predict Sets

$S ::= \mathbf{a} S \mathbf{b} \mid \varepsilon$

$PREDICT(S ::= \mathbf{a} S \mathbf{b}) = \{\mathbf{a}\}$

$PREDICT(S ::= \varepsilon) = \{\mathbf{b}, \text{eof}\}$

LL(1) parse table

Assignment Project Exam Help

<https://powcoder.com>

	a	b	eof	other
S	$S ::= \mathbf{a} S \mathbf{b}$	$S ::= \varepsilon$	$S ::= \varepsilon$	error

Table Driven LL(1) Parsing

Example:

$S ::= \mathbf{a} S \mathbf{b} \mid \varepsilon$

Predict Sets

$PREDICT(S ::= \mathbf{a} S \mathbf{b}) = \{\mathbf{a}\}$

$PREDICT(S ::= \varepsilon) = \{\mathbf{b}, \text{eof}\}$

LL(1) parse table

Assignment Project Exam Help

<https://powcoder.com>

	a	b	eof	other
S	$S ::= \mathbf{a} S \mathbf{b}$	$S ::= \varepsilon$	$S ::= \varepsilon$	error

Review: Table Driven LL(1) Parsing

Input: a string w and a parsing table M for G

push eof

push Start Symbol

token $\leftarrow next_token()$

$X \leftarrow$ top-of-stack

repeat

if X is a terminal then

if $X == token$ then

pop X

token $\leftarrow next_token()$

else error()

else /* X is a non-terminal */

if $M[X, token] == X \rightarrow Y_1 Y_2 \dots Y_k$ then

pop X

push Y_k, Y_{k-1}, \dots, Y_1

else error()

$X \leftarrow$ top-of-stack

until $X = EOF$

if token $\neq EOF$ then error()

	a	b	eof	other
S	$S ::= aSb$	$S ::= \epsilon$	$S ::= \epsilon$	error

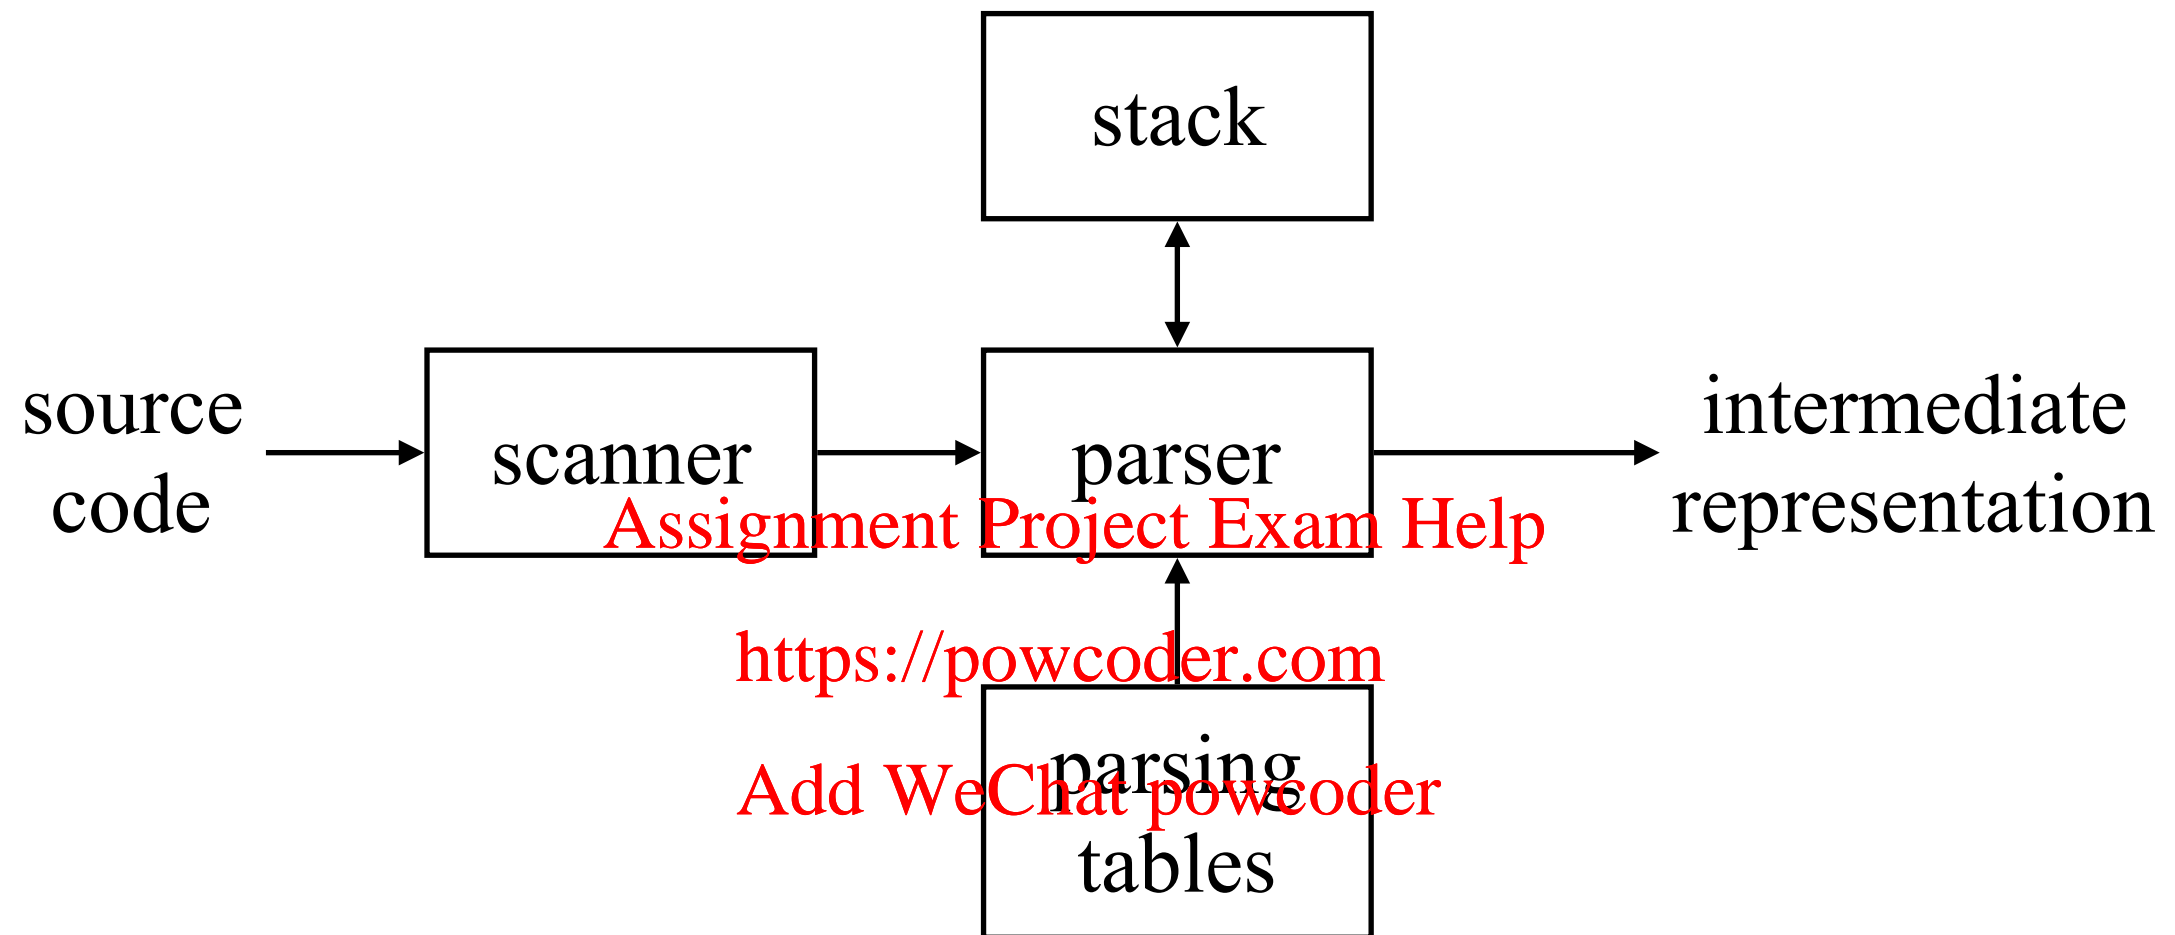

<https://powcoder.com>

Add WeChat powcoder

M is the parse table

Predictive Parsing

Now, a predictive parser looks like:

Rather than writing code, we build tables.

Predictive Parsing

Now, a predictive parser looks like:

Rather than writing code, we build tables.
Building tables can be automated!

Predictive Parsing

So far:

- Introduced **FIRST**, **FOLLOW**, and **PREDICT** sets
- Introduced **LL(1)** condition:
 - A grammar G can be parsed predictively with one symbol of lookahead if for all pairs of productions $A ::= \alpha$ and $A ::= \beta$ that satisfy:
$$\text{PREDICT}(A ::= \alpha) \cap \text{PREDICT}(A ::= \beta) = \emptyset$$
- Introduced a recursive descent parser for an **LL(1)** grammar

<https://powcoder.com>

~~Add WeChat powcoder~~

How to automatically construct *FIRST* and *FOLLOW* sets?

FIRST and FOLLOW Sets

FIRST(α):

For some $\alpha \in (T \cup NT \cup EOF \cup \varepsilon)^*$, define **FIRST** (α) as the set of tokens that appear as the first symbol in some string that derives from α .

Assignment Project Exam Help

That is, $x \in \text{FIRST}(\alpha)$ iff $\alpha \Rightarrow^* x\gamma$ for some γ
<https://powcoder.com>

Add WeChat powcoder

FIRST set is defined over the strings of grammar symbols
 $(T \cup NT \cup EOF \cup \varepsilon)^*$

T: terminals NT: non-terminals

Computing *FIRST* Sets

For a production $A \rightarrow B_1 B_2 \dots B_k$:

- $\text{FIRST}(A)$ includes $\text{FIRST}(B_1) - \epsilon$
- $\text{FIRST}(A)$ includes $\text{FIRST}(B_2) - \epsilon$ if B_1 can be rewritten as ϵ
- $\text{FIRST}(A)$ includes $\text{FIRST}(B_3) - \epsilon$ if both B_1 and B_2 can derive ϵ
- ...
- $\text{FIRST}(A)$ includes $\text{FIRST}(B_m) - \epsilon$ if $B_1 B_2 \dots B_{m-1}$ can derive ϵ

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

$\text{FIRST}(A)$ includes $\text{FIRST}(B_1) \dots \text{FIRST}(B_m)$ not including ϵ iff
 $\epsilon \in \text{FIRST}(B_1), \text{FIRST}(B_2), \text{FIRST}(B_3), \dots, \text{FIRST}(B_{m-1})$

$\text{FIRST}(A)$ includes ϵ iff
 $\epsilon \in \text{FIRST}(B_1), \text{FIRST}(B_2), \text{FIRST}(B_3), \dots, \text{FIRST}(B_k)$

First Set Construction

Build FIRST(X) for all grammar symbols X:

- For each X as a terminal, then FIRST(X) is {X}
- If $X ::= \varepsilon$, then $\varepsilon \in \text{FIRST}(X)$
- 1. For each X as a non-terminal, initialize FIRST(X) to \emptyset
- 2. **Iterate until** no more terminals or ε can be added to any FIRST(X):

For each rule in the grammar of the form $X ::= Y_1 Y_2 \dots Y_k$

add a to FIRST(X) if $a \in \text{FIRST}(Y_1)$

add a to FIRST(X) if $a \in \text{FIRST}(Y_i)$ and $\varepsilon \in \text{FIRST}(Y_j)$

for all $1 \leq j \leq i-1$ and $i \geq 2$

add ε to FIRST(X) if $\varepsilon \in \text{FIRST}(Y_i)$ for all $1 \leq i \leq k$

End iterate

Filling in the Details: Computing *FIRST* sets

for each $x \in (T \cup \text{EOF} \cup \varepsilon)$

$\text{FIRST}(x) \leftarrow \{x\}$

for each $A \in \text{NT}$, $\text{FIRST}(A) \leftarrow \emptyset$

Initially, set *FIRST* for each terminal symbol, EOF and ε

while (*FIRST* sets are still changing) do

for each $p \in P$, of the form $X \rightarrow Y_1 Y_2 \dots Y_k$ do

temp $\leftarrow \text{FIRST}(Y_1) - \{\varepsilon\}$

$i \leftarrow 1$

while ($i \leq k-1$ and $\varepsilon \in \text{FIRST}(Y_i)$)

temp $\leftarrow \text{temp} \cup (\text{FIRST}(Y_{i+1}) - \{\varepsilon\})$

$i \leftarrow i + 1$

end // while loop

if $i == k$ and $\varepsilon \in \text{FIRST}(Y_k)$

then temp $\leftarrow \text{temp} \cup \{\varepsilon\}$

$\text{FIRST}(X) \leftarrow \text{FIRST}(X) \cup \text{temp}$

end // if - then

end // for loop

end // while loop

end // if - then

end // for loop

end // while loop

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Outer loop is monotone
increasing for *FIRST* sets
 $\Rightarrow |T \cup \text{NT} \cup \text{EOF} \cup \varepsilon|$ is
bounded, so it terminates

Example

Consider the SheepNoise grammar and its *FIRST* sets

Goal	::= SheepNoise
SheepNoise	::= SheepNoise baa baa

baa is a terminal symbol

Clearly, $FIRST(x) = \{baa\}, \forall x \in (T \cup NT)$

Symbol	<i>FIRST</i> Set
Goal	baa
SheepNoise	baa
baa	baa

Computing *FIRST* sets

```
for each  $x \in (T \cup \text{EOF} \cup \varepsilon)$   
     $\text{FIRST}(x) \leftarrow \{x\}$   
for each  $A \in \text{NT}$ ,  $\text{FIRST}(A) \leftarrow \emptyset$ 
```

Initialization assigns each *FIRST* set a value

```
while (FIRST sets are still changing) do  
    for each  $p \in P$ , of the form  $X \rightarrow Y_1 Y_2 \dots Y_k$  do  
         $\text{temp} \leftarrow \text{FIRST}(Y_1) - \{\varepsilon\}$   
         $i \leftarrow 1$   
        while ( $i \leq k-1$  and  $\varepsilon \in \text{FIRST}(Y_i)$ )  
             $\text{temp} \leftarrow \text{temp} \cup (\text{FIRST}(Y_{i+1}) - \{\varepsilon\})$   
             $i \leftarrow i + 1$   
        end // while loop  
        if  $i == k$  and  $\varepsilon \in \text{FIRST}(Y_k)$   
            then  $\text{temp} \leftarrow \text{temp} \cup \{\varepsilon\}$   
             $\text{FIRST}(X) \leftarrow \text{FIRST}(X) \cup \text{temp}$   
        end // if - then  
    end // for loop  
end // while loop
```

FOLLOW Sets

FOLLOW(A):

For $A \in \mathbf{NT}$, define **FOLLOW(A)** as the set of tokens that can occur immediately after A in a valid sentential form.

Assignment Project Exam Help

FOLLOW set is defined over the set of non-terminal symbols, **NT**.

Add WeChat powcoder

Follow Set Construction

To Build FOLLOW(X) for non-terminal X:

- Place EOF in FOLLOW(<start>)
- 1. For each X as a non-terminal, initialize FOLLOW(X) to \emptyset
- 2. Iterate until no more terminals can be added to any FOLLOW(X):

For each rule p in the grammar

If p is of the form $A ::= \alpha B \beta$, then
if $\epsilon \in FIRST(\beta)$

Place $\{FIRST(\beta) - \epsilon, FOLLOW(A)\}$ in FOLLOW(B)

else

Place $\{FIRST(\beta)\}$ in FOLLOW(B)

If p is of the form $A ::= \alpha B$, then

Place FOLLOW(A) in FOLLOW(B)

End iterate

Computing *FOLLOW* Sets

for each $A \in \mathbf{NT}$

$\mathbf{FOLLOW}(A) \leftarrow \emptyset$

$\mathbf{FOLLOW}(S) \leftarrow \{ \mathbf{EOF} \}$

while (*FOLLOW* sets are still changing) do

for each $p \in P$, of the form $A \rightarrow B_1 B_2 \dots B_k$ do

Don't add ϵ

TRAILER $\leftarrow \mathbf{FOLLOW}(A)$

for $i \leftarrow k$ down to 1

if $B_i \in \mathbf{NT}$ then // domain checking

$\mathbf{FOLLOW}(B_i) \leftarrow \mathbf{FOLLOW}(B_i) \cup \text{TRAILER}$

if $\epsilon \in \mathbf{FIRST}(B_i)$ // add right context

TRAILER $\leftarrow \text{TRAILER} \cup (\mathbf{FIRST}(B_i) - \{ \epsilon \})$

else TRAILER $\leftarrow \mathbf{FIRST}(B_i)$ // no $\epsilon \Rightarrow$ truncate the right context

else TRAILER $\leftarrow \{ B_i \}$ // $B_i \in \mathbf{T} \Rightarrow$ only 1 symbol

To build *FOLLOW* sets, we need *FIRST* sets

Computing *FOLLOW* Sets

For a production $A \rightarrow B_1 B_2 \dots B_k$:

- It works its way backward through the production:
 $B_k, B_{k-1}, \dots B_1$
- It builds the *FOLLOW* sets for the rhs symbols,
 $B_1, B_2, \dots B_k$, not A
- In the absence of ϵ , *FOLLOW*(B_i) is just *FIRST*(B_{i+1})
 - As always, ϵ makes the algorithm more complex

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

To handle ϵ , the algorithm keeps track of the first word in the trailing right context as it works its way back through rhs: $B_k, B_{k-1}, \dots B_1$

Computing *FOLLOW* Sets

Consider the simplest parentheses grammar

1	Goal ::= List
2	List ::= Pair List
3	ϵ
4	Pair ::= <u>LP</u> List <u>RP</u>

Symbol

Initial

Goal

EOF

List

\emptyset

Pair

\emptyset

Assignment Project Exam Help
